

GIFTLED

STEAM EDUCATION FOR GIFTED INDIVIDUALS

Gifted and talented individuals have the skills to go far in the fields of science, technology, engineering, art and mathematics. However, nowadays there is still a lack of personalised education for this group, which unfortunately prevents them from developing their skills and knowledge to the fullest.

The idea for the GIFTLED project is to provide learning opportunities to increase their motivation and avoid the feelings of frustration and stagnation of gifted people by offering them a pathway to realise their potential in STEAM.

GIFTLED OBJECTIVES

Enable gifted/talented learners to participate in STEAM education with high motivation within their potential and skills. Under this framework, gifted/talented students will develop products that will support their creativity, design, and problem-solving skills.

Promote the use of innovative pedagogical methods in the education of gifted/talented students as well as innovative and digital education applications

Within the scope of the project, participating countries will share their expertise and knowledge sharing and hold joint applications for the education of highly talented students.

Encourage the development of STEAM education all around partnering countries.
